

A WORLD OF STANDARDS

ACORN RI40

Acorn 
The choice of experience.

A WORLD OF STANDARDS

The Acorn R140 workstation represents a major price breakthrough for UNIX systems. Acorn has exploited the performance of its award-winning 32-bit RISC processor to produce the first in a series of personal workstations running the UNIX operating system at a price below that of any comparable product.

The RISC processor designed and developed in the UK by Acorn is an outstanding example of pioneering technology leading to radical cost savings. By launching the R140

workstation, Acorn has transformed the economics of making UNIX available to users in all fields.

Combining processing power, windowing and graphics, in-built data storage and standard UNIX software, the Acorn R140 workstation supplies low-cost desktop power to the user whilst maintaining full connectivity with other workstations, PCs and multi-user systems.

EDUCATION AND RESEARCH

The Acorn R140 workstation has been developed to meet the needs within the education and research communities for powerful but affordable UNIX systems.

The standalone capabilities of the R140 workstation make it possible to supply single-user UNIX systems with full windowing and graphics capability, their own powerful processors, internal hard disc and floppy disc drive.

The networking capabilities of the R140 workstation present new opportunities in education and research to extend existing multi-user systems or to create new installations that have previously been ruled out on the grounds of cost.

OPEN DISTRIBUTED PROCESSING

Due to its adherence to a number of industry standards including Berkeley UNIX, Ethernet, TCP/IP protocols for networking, Yellow Pages, NFS for file access across the network and X Windows, the Acorn R140 presents an affordable way of developing or expanding an open distributed processing system.

Acorn R140s can be connected to mini and mainframe computers as well as to workstations from Sun, Apollo, Digital Equipment, Hewlett Packard and other manufacturers to form part of a fully integrated computing environment with efficient file sharing and distributed processing across the network.

In a network of this type, the main advantages of the Acorn R140s are the additional processing power, data storage and graphics capability that they offer, avoiding the performance degradation and network management problems caused by adding "dumb" terminals or PCs.

With the R140 workstation Acorn provides a powerful but affordable UNIX system together with the reassurance of long term commitment and support from the leading British manufacturer of computers for the education and research communities.

FEATURES

The Acorn R140 workstation includes a comprehensive range of features and capabilities in its specification.

Operating system

- The Acorn RISC *iX* operating system is a comprehensive implementation of Berkeley 4.3 UNIX with SVID extensions and C compiler.

Graphics

- X Windows (Version 11, release 2) software provides windowing and graphics facilities and windowed terminal emulation. A range of monitors can be used, with resolutions up to 1152 × 900 in monochrome (as found on Sun workstations) and 640 × 480 in colour (the VGA mode of PCs).

Connectivity

- NFS, Yellow Pages, TCP/IP networking and X11 client/server software are provided to give smooth integration into network environments via Ethernet. R140 workstations can be connected together and also to mini, mainframe and super-computers as well as to workstations from all major manufacturers to share data storage, processing power or peripheral equipment. Acorn's Econet local area network provides an alternative low-cost option.

Ease of learning

- The X.desktop user interface from IXI Limited allows new UNIX users to interact in an easy-to-learn window, icon, mouse and pointer environment where applications may be started and files manipulated by mouse clicks rather than typed commands.

Alternative operating systems

- MS-DOS and Acorn's RISC OS give access to a vast library of inexpensive PC and microcomputer software for secondary tasks. MS-DOS and RISC OS floppy discs may also be read from, written to and formatted from within the RISC *iX* environment.

Maintenance and support

- The Acorn R140 is complete with a 12-month support package which includes on-site hardware maintenance, telephone hotline assistance and diagnostics, warranty and free incremental software updates as released.

SPECIFICATIONS

STANDARD HARDWARE

System unit:

- ARM (Acorn RISC Machine) 32-bit Reduced Instruction Set Computer processor.
- 4 Mbytes RAM, 512 Kbytes ROM
- 60 Mbytes (unformatted) internal hard disc
- 1 Mbyte (unformatted) internal 3.5" floppy disc drive
- Four expansion slots

Keyboard and mouse:

- 103 key 'enhanced PC' style keyboard
- 3-button mouse

Standard interfaces:

- Serial interface port
- Parallel interface port

Display monitor support:

- Ultra-high resolution monochrome 1152 × 900 pixel graphics 144 × 45 or 96 × 32 characters
- High resolution colour, gray-scale or monochrome 640 × 480 × 4 bits per pixel giving 16 from a palette of 4096 possible colours 80 × 20, 80 × 24 and 80 × 30 characters
- Text applications 80 × 20, 80 × 24 and 80 × 30 characters

HARDWARE

EXPANSION OPTIONS

Ethernet:

- Combined expansion card with both Ethernet and 'thin' Ethernet/Cheapernet, compatible with IEEE 802.3

External storage:

- SCSI expansion card* for external hard discs, tape drives, scanners and laser printers
- Support for a second external winchester using the internal ST506 disc controller

Floating point co-processor:

- Floating point expansion card* with WE 32206 co-processor (IEEE 754 compatible)

Econet:

- Internal Econet expansion module (which does not use an expansion slot)

Other expansion options from third parties include a multiple serial port expansion card, video digitisers, sound samplers, fax and modem cards, IEEE-488 expansion card and an Analogue to Digital converter (12-bit) card.

STANDARD SOFTWARE

RISC iX operating system:

- Berkeley standard distribution 4.3, two-user licence
- demand paged virtual memory
- C shell and Bourne shell
- Berkeley toolkit
- TCP/IP with Berkeley networking commands
- uucp, telnet, ftp, micro-Emacs, Kermit
- SVID Kernel extensions (KE, OS)
- Full ANSI C compiler
- pcc compatibility mode for non-ANSI code
- NFS 3.2, Yellow Pages
- Programmers and documenters tools
- Special features for:
 - efficient use of memory including compression for disc storage end-user system administration
 - virtual terminal interface giving multiple VT220 terminal emulation

Window system:

- X Window System Version 11 release 2
- awm, twm and uwm window managers
- X.desktop from IXI Limited

MS-DOS operating system: (optional)

- via RISC OS PC Emulator software

RISC OS operating system:

- including application suite and manuals

DOCUMENTATION

Included:

- R140 Operations Guide
- RISC iX Users Guide
- RISC iX X.desktop Guide

Optional:

- RISC iX Programmer's Reference Manual
- RISC iX System Administrator's Manual
