

ACORN ARCHIMEDES SOUND SAMPLER

The A448 Audio Sound Sampler introduced by Armadillo Systems, consists of a sound sampler board and software. It is designed to add-on to the Acorn Archimedes line of computers.

Functions include: Sampling sound/storing samples to disc and loading samples from disc/deleting portions of samples/inserting and copying portions of samples/adding echo (with full control of parameters) overlaying (i.e. adding) two samples/four quadrant multiplication/sequencing of various samples etc.

A playback/sample module allows the playing of any sound file through VIDC from any program and sampling to a specified memory block.

Audio input can be either line or mic levels. Either can be switched by a link on the board. Input is via a mono 1/4 inch jack socket.
