

## ADDENDUM

### LINK SETTINGS — DISC BUFFER V3

There are four LINKS on the revised version 3 disc buffer board, all used to give compatability with a greater number of disc drives than the previous version.

LINK	USE
2	This line is used on the A3000 to signal that the disc in the drive has changed. Some drives do not support this signal, remove this link if this is the case.
4A	On the A3000 the internal disc drive select light comes on when any drive is accessed! This can be inhibited by ensuring this link is open.
4B	Some external drives turn there disc select light on when any drive is accessed! This can be inhibited by ensuring this link is open.
34	This link was provided to give compatability to a rare drive! One that does not give a READY signal. This link will hold the READY line active at all times. ONLY USE IF NECESSARY.
