NEW!

for RISC OS 2000

Serving Surrey, Hampshire
and surrounding counties!

CompactFlash™ & SmartMedia™ for RISC OS!

Surftec are pleased to announce the launch of our range of CompactFlash™ and SmartMedia™ card readers.

Compatible with all makes of RISC OS computers* and Precedence NCs, they are easily plugged into the parallel port which allows you to download data from CompactFlash and SmartMedia cards, from devices such as Digital Cameras, PDAs, MPEG3 Portable Players etc.

Once the reader has been plugged into the parallel port and PS2 keyboard port (for power), you simply load the RISC OS driver. This device allows other parallel devices to be daisy-chained.

When the software has been loaded, just treat the media like a floppy disc, you can copy, delete and rename files while on the

CompactFlash or SmartMedia cards. The Surftec RISC OS drivers provide an extra disc icon allowing the contents of the media to be read and loaded into your favourite Acorn photo software such as ImageMaster, ChangeFSI etc.

Card Readers/Drivers

CompactFlash Reader (inc Acorn driver) £79

SmartMedia Reader (inc Acorn driver) £79

Acorn RISC OS/NC Driver* £39

* Surftec driver will not work with all types of card reader, and requires a bi-directional parallel port.

Digital Camera Owners!

Welcome

Welcome to RISC OS 2000 for what promises to be an outstanding show. Last year the ARM Club organised the first two day show in the South since the demise of Acorn World. The outstanding success of RISC OS 99 meant that a repeat was inevitable. Indeed, one hopes this will become an annual event to compliment the excellent Wakefield show.

Preparations for RISC OS 2000 began last February, so today marks the fruition of nine months work. For RISC OS 99 the burden fell on the stalwarts of the ARM Club and especially the sterling Mark Smith. This year the RISC OS User Group of London and the Surrey and Sussex Acorn User Group have supported the ARM Club in organising RISC OS 2000. The enthusiasm for RISC OS computers shown by the organising committee, sponsors, exhibitors and helpers has made our task much easier. The organisation of RISC OS 2000 was very much a team effort but we would particularly like to thank Chris Hornby of Spacetech (and now Photodesk) for his creation of the show advert, Mike Williams of Akalat Publishing for his production of the show guide against a severe deadline and Mark Smith for his guidance and shear hard work.

Creation of such a show is a major undertaking and we are eternally grateful for those who have given sponsorship or free use of their expertise or facilities. Castle and RiscStation have consistently supported RISC OS shows and we thank them for their support of RISC OS 2000. Acorn User have reinforced their reputation for being the foremost RISC OS magazine by providing readers with news coverage of the show and exhibitors. We trust you will enjoy visiting the show as much as we enjoyed organising it, and see you again at RISC OS 2001!

John Sawyer, ARM Club

It's been a short year, even with the extra leap-century day, the time has just flown by but has anything really happened in the RISC OS world? There are a few people around, many with loud voices, who would have us believe that the end is nigh, I believe them as much as I would anyone wearing a sandwich board and wandering up and down the High Street. They can go into their local High Street store and buy a PC if they want to, but such people are a small loss. The death of the Acorn market has been predicted as being in "the next year" for so long now that I've given up even listening.

It is a popular misconception that you have to have resources (whether it's money or something else) before you can achieve anything. Resources help – of course they do – but without them you just have to be a little bit cleverer: bright ideas come from original thinkers and they don't come much more original than RISC OS people.

Rebuilding the market to a point of real viability is not going to be easy, but it is not impossible. What it requires is people working together, co-ordinated effort in the same direction – the one thing we cannot afford is internal bickering. This doesn't mean that companies cannot be in competition with one another; it does mean that the overriding factor in all decision making should be: Does this promote RISC OS, or damage it?

That way we can compete in the real world and get to a point where messages like this are completely unnecessary because we will be successful. This show reveals some exciting new hardware and some very nice new software. Enjoy!

Steve Turnbull, Acorn User

Woodbridge Road

FRAMLINGHAM

Suffolk IP13 9LL

Tel: 01728 723 200

Fax: 0800 783 9638

Website: <http://www.castle.org.uk/>

At RISC OS 2000, Castle will be showing their newly released exciting products for the RISC OS platform.

KINETIC RISCPC

The new Kinetic RiscPC features SD RAM, and is therefore up to 4x faster than a standard StrongARM Risc PC. With virtually full compatibility for all current software, the Kinetic RiscPC leads the way forward for ultra fast RISC computing.

KINETIC PROCESSOR UPGRADE CARD

Upgrade your existing RiscPC to full Kinetic performance. The Kinetic Processor Upgrade Card features fast SD RAM. It will be available in limited numbers at the show, so early purchase is recommended. Trade-up schemes are available.

OREGANO

Oregano is the new fast, fully featured Web Browser for the RISC OS platform. Compatible with all RISC computers running RISC OS 3.5 and above, Oregano supports the widest range of WWW features. It is also fast and easy to use.

Full details on the stand.

Stand U5

Charity Stall

Browse through the hardware and software on the charity stall. Pick up a bargain and help a worthy cause at the same time. The irrepressible Paul will be on hand to identify those strange components and advise on software compatibility. All proceeds go to charity so please be generous.

Stand U10a
