

Network Socket Boxes

SJ Research Network Socket Boxes

The SJ Research Socket Box is designed for easy installation of Econet computer networks. It has two 5-pin DIN sockets mounted in a small plastic box. Holes are provided in the back of the box for mounting screws and cable entry. Slots can be cut for the cable if side or base entry is required.

Internally, the sockets are mounted on a small printed circuit board, which also carries insulation displacement terminals for the main Econet cable. Installation is easy: the cores are pressed in to the terminals using the tool provided. This saves stripping or soldering of the cable.

The terminal blocks are arranged so that the cable may either be spliced or looped through without cutting. The ability to loop through the socket box leads to fewer joins in the final installation, contributing to the overall reliability and performance of the network.

All SJ Research Socket Boxes are fully tested before despatch.

Each Kit contains:

- Five Socket Box Assemblies
- One Installation Tool
- An Installation Manual
