FLOPPY DISC ERROR CODES

02   Timeout. Access retries timed out i.e. if drive door
      left open.

06   Clock error. During a disc read operation, a clock bit
      was missing (dropped).

0A   Late DMA. During either a disc read or write operation
      the data channel did not respond within the allotted
      time interval to prevent data from being overwritten or
      lost.

0C   ID field CRC error. The CRC word derived from the data
      read in an ID field did not match the CRC word written
      in the ID field when the track was formatted.

0E   Data CRC error. During a disc read operation, the CRC
      word derived from the data field did not match the data
      field CRC word previously written.

12   Write protect. Disc is write protected (read only).

14   Track zero not found. During a seek to track 00
      operation, the drive failed to provide a track 00
      indication after being stepped 255 times.

16   Write fault. This error is dependant on the drive
      supported and indicates that the fault line to the 8271
      has been activated by the drive.

18   Sector not found. Either the sector addressed could not
      be found within a complete revolution of the disc or the
      track address specified did not match the track address
      contained in the ID field.
